

the 35 boundary conditions $[p; q, r; s]$ of $SU(4)$, seen by the multiplet **15** = (2, 1, 1, 0)

$\chi_\lambda(P_0)$
layers by $r + s$

$\chi_\lambda(P_1)$
layers by $q + s$

$\chi_\lambda(P_0 P_1)$ – the one η multiplies
layers by $q + r$

● $\det U = -1$: the coset (16 of 35)
